AGRICULTURAL PROGRESSION.

When, five or six years ago, we asserted that this Colony possessed the means of feeding its population from the product of its own soil we were laughed at. When we took the position that permanent prosperity depended upon the development of its agricultural resources, and that it was the first duty of the Government to render, as far as possible, the working of the gold mines tributary thereto, we were called a fool for our pains. At that period the entire population subsisted upon foreign productions, and the bulk of the proceeds of their labor went to pay for these imported productions. Flour and bacon and beans were brought from the interior of California and Oregon and transported five hundred miles into the interior of our own country to feed the diggers of gold. At one time the cost of transit from the seaboard alone was one dollar a pound avoirdupois! and the brave pioneer miners lived upon bacon and beans, sometimes upon "beans straight," and got the scurvy! These provisions passed over nearly four hundred miles of country scarcely less adapted to their production than the country from which they were imported. Thus the mines of British Columbia might truly be said to have been worked for the benefit of the foreign producer. To gauge our own prosperity by the yield of the mines was an obvious fallacy. The converse of the proposition would have been nearer the truth. The process was really one of impoverishment, and the greater the yield of the mines the more rapid the process. In course of time the scales began to fall from men's eyes. Light gradually dawned. The great distance of the principal gold mines from the seaboard proved of itself an element which contributed to the desired result. First, one foolishly conceived the idea of raising a few vegetables east of the Cascade range. To the astonishment of many who ought to have known better, the vegetables grew! Thus the spell was broken. Others gradually betook themselves to the cultivation of the soil; and although husbandry was conducted in the most rude and imperfect fashion, people were soon induced to believe that British Columbia was not, after all, the barren and inhospitable Siberia which Hudson Bay and other authority had painted it. From raising vegetables, a few enterprising fellows ventured upon trying cereals, although assured by the very wisest of mortals that they could not possibly ripen. But they did ripen; and so rapid was the progress of agricultural development thus begun, that in less than three years after the first pound of colonial flour was ground, not a pound of foreign flour passed to the eastward of the Cascade Range! Bacon and beans, which but three short years before constituted almost the only article of food, came to be discarded by the miner, who preferred his fresh wheat-loaf, made from Colonial grain and his savory beef steak or mutton chop, fattened upon the nutritious bunch-grass of the midlands. To-day the miners of Cariboo live solely upon the products of the Colony. Even the delicious fresh butter, milk, chickens,

eggs, tomatoes, melons, Indian corn have ceased to be a rarity in the markets of our most remote gold field. Nor are these productions supplied at prices which place them beyond the reach of the masses. Many of them are scarcely dearer in Cariboo than in New Westminster and Victoria. It was but the other day that we saw, exhibited at the Yale show, vegetables grown on Williams Creek, Indian corn, tomatoes, water melons, musk melons and grapes grown East of the Cascade Range. What a change hath five years wrought? But while the interior has been the scene of such a revolution, what have we in the lower country been doing? Has material progress been equally marked near the seaboard? Great progress has undoubtedly been made. Those who visited the Agricultural Exhibition recently held at Yale and in this city witnessed the most practical evidence of that progress; and Victoria is about to place a third witness in the box. We hope many of the farmers of the Lower Fraser will enter an appearance at the Victoria Exhibition, and show the skeptical Islanders that the country around New Westminster is not the "howling wilderness" some of them are so fond of painting it. Besides, we are all one people now, with one common interest. Let us join, therefore, in one united, friendly effort to place the Colony in its true character before an infidel world. We have said there has been marked progress in the lower country. Perhaps in no part has that progress been of a more solid and satisfactory character than in this District. Yet, notwithstanding all that there is to encourage to renewed effort and inspire confidence in future destiny, one cannot altogether get rid of the feeling that the interior has stolen a march upon us, has outstripped us in agricultural progression. Are we not to-day dependent upon our foreign neighbor for every loaf we eat? This, too, with a protective duty of a dollar and a half on every barrel of flour! Including the Island consumption, we are still eating foreign flour at the rate of thirteen thousand barrels a year! Frying foreign pork at the rate of 100,000 pounds a year, with nearly the same weight of Yankee butter! This, too, in spite of a protective duty equal to a smart retail profit. Why, we are importing costs upon a million pounds of barley a year, although our own growers are protected by a duty of 32 cents on every hundred pounds. We import considerably over half a million pounds of wheat a year, in addition to the two and three quarter million pounds of flour! These are only a few of the staples. In many articles of less importance we still import much, and on most of them there is a protective duty nearly equal to the market price of the article in other countries. Can we expect to enjoy any great measure of real prosperity under such a condition? The country is being impoverished every year by hundreds of thousands—close upon a million—being sent out of it in payment of articles for the production of which our own soil and climate are admirably adapted. Let not the true friends of the Colony rest until this ruinous drain is stopped, and our own soil is made to administer to our every want.

THE VICTORIA EXHIBITION is to be held on Thursday next. Exhibitors going from here will have themselves and their goods and stuff carried down and up free of charge. We hope many of our farmers will avail themselves of the liberality of the Hudson Bay Company, and give the Islanders an illustration of the productive capacity of this district. In fruits, roots and vegetables the farmers of the Lower Fraser have nothing to fear.

SATURDAY, OCTOBER 3, 1868.

THE EXHIBITION.

The New Westminster District Agricultural Exhibition for 1868 was held in this city on Wednesday. About noon, His Excellency the Governor, accompanied by Mrs. Seymour and his Private Secretary, arrived. His Excellency's arrival was announced by a peal from the bells of Holy Trinity, and he was received at the entrance to the room by the "Hyacks" in uniform, the band playing an appropriate air. The President of the Society met His Excellency and Mrs. Seymour at the door and conducted them on to a dais prepared for the purpose, and having announced to those assembled that His Excellency had been good enough to consent to open the Exhibition, the Governor rose and spoke a few appropriate words. He said he felt a deep interest and abiding faith in the rich resources and future development of the Lower Fraser, and expressed gratification at seeing such striking evidence of substantial prosperity as was spread out before him. He concluded his remarks by formally declaring the Exhibition open. Upon the Governor resuming his seat the President of the Society proposed three cheers for the Queen, which were heartily given. He then proposed three cheers for His Excellency the Governor, which were also given with great heartiness, and followed by three cheers enthusiastically given for Mrs. Seymour. The Governor and his party then proceeded to examine the various articles on exhibition, making quite a lengthened stay. They made a second visit later in the day and appeared much interested. The large Hall was decorated with much taste, the walls being covered with paintings, pictures, needle-work, &c., and the flags of almost all nations being displayed with excellent effect. At the upper end of the Hall, in the centre, was a large case containing a very interesting collection of birds, reptiles, Indian curiosities and articles of jewelry manufactured by the natives, while in front of it stood a case containing a very complete collection of mineral specimens, arranged by F. G. Chudet, Esq., the same that took the 20 prize at the Yale Exhibition. On either side and down the main sides of the Hall were arranged various articles of Colonial manufacture. Amongst the most important of these we have only time to notice a wheelbarrow, constructed upon a new and improved principle, and a very nice model plough, made by Mr. Walter Blackie, some trunks and a great variety of articles in tin ware from the establishments of Messrs. Clute & Clarkson and Mr. J. Cunningham. Two vases of artificial flowers, made by Mrs. Chris. Lee, and a family wreath of flowers made out of the hair of the several members of the family, by Mrs. J. Cunningham, were exquisitely beautiful and attracted much attention. By no means the least interesting article in the mechanical model line was the hoisting gear, overshoot water-wheel and pump-box, showing the shaft and hoisting and washing apparatus, as used in the deep workings in Cariboo. The model was made by Mr. Christie, of Barkerville, and served admirably to illustrate the *modus operandi* by which the rich pay dirt is brought up from a depth, in some instances, of hundreds of feet, and the precious metal separated from the debris. Amongst the needle work perhaps the most noticeable were a couple of patch-work quilts, made by Mrs. E. Cafferty. Of sampler work there were many very creditable specimens, but in this department we cannot particularize. A few very fine skins of native fur-bearing animals were exhibited by Messrs. McLean & Franklin. Turning into the poultry department, there was a very good show, including a number of really fine birds. Leaving the prize-list to speak for itself, there were a pair of beautiful Polish fowls, exhibited by Mrs. Prichard, and some very fine rabbits, by Master Charles Smith. Coming to the main body of the room, if one were to leave out of view all the unpropitious circumstances surrounding the exhibition this year, it would, perhaps, scarcely be candid to pronounce it a success.

But when the remarkable dryness of the season, and its consequent stunting influence on the growth of roots and vegetables is taken into due consideration, and when the fact is borne in mind that for several days previous to, as well as during the holding of the Exhibition the whole country was enveloped in a fog so dense as to entirely derange the running of the steamers and render it almost impossible for the farmers to grope their way to town, either by land or by water, we think the gentlemen composing the Committee of Management are fairly entitled to congratulate themselves upon the result. In fruits, cereals and dairy produce the show was greatly in advance of last year; but in roots and vegetables there was a perceptible falling off. The salmon in barrels, exhibited by Messrs. F. Kaye & Co., though good, were, unfortunately, debarred from taking prizes on account of the absence of membership qualification. The same firm exhibited the finest sample of cranberries we have seen in the Colony. Mr. Syme had no competitor in the articles of cured salmon, salmon in cans, fish oils, &c. His oilman oil is deserving of more than a passing notice. So thoroughly clarified as to retain no smell whatever of the fish, it promises to become an important article of commerce. Indeed we are assured that, as a medicine, it is superior to the celebrated cod-liver oil. We hope to see it attract the attention of the Medical Faculty; for should it prove to be as valuable as we are greatly disposed to think it must become an important article of commerce to this Colony, as the supply is almost unlimited. We must not forget to mention the jams and jellies and the really delicious currant wine exhibited by Mrs. Wells, Chilliwack. There were several instances of persons exhibiting very good and very interesting articles under conditions which precluded competition for prizes; some of them with the laudable object of contributing towards the interest and success of the show. Amongst these we may mention Mr. Seratchley, who sent in excellent samples of Savoy cabbage and onions. We shall doubtless hear complaints about our having passed over in silence many articles deserving of special notice. It is quite possible that in those hurried and very imperfect remarks, we may have overlooked articles possessing greater merit than some of those mentioned. But it is obviously impossible where the articles are so numerous and so varied, to do justice in every instance; and, besides, our time, as President of the Society, had so many demands upon it during the day, that we could not give to our journalistic duties that attention that could be wished. With this explanation we hope to be excused for leaving the subject of prize-list to do the rest. The prizes were given out at 9 o'clock on Wednesday evening, upon which occasion there was quite a large attendance. The prize awarded to Hospital. It may not be altogether out of place to mention that His Excellency the Governor purchased Mr. Wells's prize cheese and Mr. Chester Chadsey's prize keg of salt butter. The following is the prize list:—

Of sampler work there were many very creditable specimens, but in this department we cannot particularize. A few very fine skins of native fur-bearing animals were exhibited by Messrs. McLean & Franklin. Turning into the poultry department, there was a very good show, including a number of really fine birds. Leaving the prize-list to speak for itself, there were a pair of beautiful Polish fowls, exhibited by Mrs. Prichard, and some very fine rabbits, by Master Charles Smith. Coming to the main body of the room, if one were to leave out of view all the unpropitious circumstances surrounding the exhibition this year, it would, perhaps, scarcely be candid to pronounce it a success.

SATURDAY, OCTOBER 3, 1868.

THE EXHIBITION.

The New Westminster District Agricultural Exhibition for 1868 was held in this city on Wednesday. About noon, His Excellency the Governor, accompanied by Mrs. Seymour and his Private Secretary, arrived. His Excellency's arrival was announced by a peal from the bells of Holy Trinity, and he was received at the entrance to the room by the "Hyacks" in uniform, the band playing an appropriate air. The President of the Society met His Excellency and Mrs. Seymour at the door and conducted them on to a dais prepared for the purpose, and having announced to those assembled that His Excellency had been good enough to consent to open the Exhibition, the Governor rose and spoke a few appropriate words. He said he felt a deep interest and abiding faith in the rich resources and future development of the Lower Fraser, and expressed gratification at seeing such striking evidence of substantial prosperity as was spread out before him. He concluded his remarks by formally declaring the Exhibition open. Upon the Governor resuming his seat the President of the Society proposed three cheers for the Queen, which were heartily given. He then proposed three cheers for His Excellency the Governor, which were also given with great heartiness, and followed by three cheers enthusiastically given for Mrs. Seymour. The Governor and his party then proceeded to examine the various articles on exhibition, making quite a lengthened stay. They made a second visit later in the day and appeared much interested. The large Hall was decorated with much taste, the walls being covered with paintings, pictures, needle-work, &c., and the flags of almost all nations being displayed with excellent effect. At the upper end of the Hall, in the centre, was a large case containing a very interesting collection of birds, reptiles, Indian curiosities and articles of jewelry manufactured by the natives, while in front of it stood a case containing a very complete collection of mineral specimens, arranged by F. G. Chudet, Esq., the same that took the 20 prize at the Yale Exhibition. On either side and down the main sides of the Hall were arranged various articles of Colonial manufacture. Amongst the most important of these we have only time to notice a wheelbarrow, constructed upon a new and improved principle, and a very nice model plough, made by Mr. Walter Blackie, some trunks and a great variety of articles in tin ware from the establishments of Messrs. Clute & Clarkson and Mr. J. Cunningham. Two vases of artificial flowers, made by Mrs. Chris. Lee, and a family wreath of flowers made out of the hair of the several members of the family, by Mrs. J. Cunningham, were exquisitely beautiful and attracted much attention. By no means the least interesting article in the mechanical model line was the hoisting gear, overshoot water-wheel and pump-box, showing the shaft and hoisting and washing apparatus, as used in the deep workings in Cariboo. The model was made by Mr. Christie, of Barkerville, and served admirably to illustrate the *modus operandi* by which the rich pay dirt is brought up from a depth, in some instances, of hundreds of feet, and the precious metal separated from the debris. Amongst the needle work perhaps the most noticeable were a couple of patch-work quilts, made by Mrs. E. Cafferty. Of sampler work there were many very creditable specimens, but in this department we cannot particularize. A few very fine skins of native fur-bearing animals were exhibited by Messrs. McLean & Franklin. Turning into the poultry department, there was a very good show, including a number of really fine birds. Leaving the prize-list to speak for itself, there were a pair of beautiful Polish fowls, exhibited by Mrs. Prichard, and some very fine rabbits, by Master Charles Smith. ADVICE GRATIS!
HOLLOWAY'S PILLS

To Purify the Blood.

These Pills have been placed by the common "FARMACIA" throughout the land of all countries, for removing impurities from the blood, and the skin.

Female Complaints.

When taking these Pills, rub Holloway's celebrated Effluant over the pit of the stomach, and over the course of the liver; on the right side under the ribs, and you will at once experience a change for the better in your digestive organs, appetite, strength, and energy. The blood is purified, though it may be gradual. The bowels are kept in good order, and the system is thoroughly cleansed.

DROPS.

The efficacy of Holloway's Pills in drops is extraordinary. They act with such peculiar effect upon the system, and the little secretions, that they are

Stomach, Liver, Kidneys and Bowels.

And the sterer be consigned to a bed of sickness
disorders of the kidneys, the Ointment should be
rubbed into the small of the back, once or twice a
day; and the Pills taken in and on, will cure any complaint
arising from these organs.

Some serious disorders of the heart, or other vital organs. But moderately of solids, take six pills nightly some little time; take plenty of fresh air with moderate exercise. And the human machinery will be quickly moved to healthful vigor. Try this but for three days, and the result will be marvellous.

Complaints incident to Children.

If complaints of children may soon be cured if cure be given to purify their blood, correct the action of the liver; and cleanse the stomach and bowels: the actions of these famous Pills will be drunk.

Holloway's Pills are the best remedy known in the world for the following diseases:—

kinds,
 Gout,
 Head-ache,
 Indigestion,
 Inflammation,
 Jaundice,
 Sore Throats,
 Stone and Gravel,
 Secondary Symp-
 toms,
 Tic Douloureux,
 Tumours,
 Ulcers,

Worms of all kinds,
Weakness from
whatever cause,
&c., &c.

There is a considerable saving by taking the larger

bottle are affixed to each box.

—
MAGWAY'S OINTMENT

Blebs, Eruptions, as Sore Heads and Scrofulous Swellings.

curer. The Pills should be taken as an auxiliary treatment, as they are so prepared as to act in such a way, facilitating and confirming the conquest of disease.

Acrid, Ulcerated Sore Throat and Quinsey.

and numerous, that these often fatal diseases are easily cured by these medicines, than even the commonest throat, if taken in time.

On the Kidneys, Stone and Gravel.

These complaints, the Ointment almost certainly cures.

the Rectum, which it will penetrate and give immediate relief, while the Pills should be taken according to the printed directions, when the most extraordinary cures may be effected by this means.

ected, after they have been cemented with water. The purifying and curative powers of this unguent have never failed. Any old sore, or ulcer always yields to its influence, and in case of fevers, its action is wonderful. Swellings may soon be reduced by following the directions.

inflamed disease is commonly preceded by irritation of the heart, and difficult respiration; which are always severe, and ever go from bad to worse: proper means of cure are resorted to. Is a universal Ointment and Pills the dropsical will ever find success; the present relief derived from these remedies is marvellously quick, and

culated and absorbent system; that the drops
vanishes, and the sufferer finds all the oppres-
sions daily decline, till natural health returns.

Gout and Rheumatism.

...ured with the greatest certainty if large quantities
of Ointment be well worked into the complaint.

Take as many Pills nightly as will act two
times during the 24 hours; eschew the use of
all stimulants. When these complaints are
system, the virulence of the complaint fre-
quently to increase.

must be taken according to the printed directions. The blood being in an impure state, perspiration is necessary. From humane motives letters of advertisement are answered gratuitously. To save carriage the blood can be obtained in the neighborhood of the sale.

Chapped hands, Scalds,
Contracted and Sore Nipples,
Stiff Joints, Sore-throats,

Files, Gout,	Sore-heads,
Glandular Swellings,	Ulcers,
Ulcers,	Wounds,
Rheumatism,	Fans.
